

Course No.	Course Name	L-T-P -Credits	Year of Introduction
EE 402	Special Electrical Machines	3-0-0-3	2015
Course Objectives			
To get an overview of some of the special machines for control and industrial applications			
Syllabus: AC Servomotors – construction – operation - DC servomotors – Stepper motor – operation – types-modes of excitation – AC series motor – Universal motor – Hysteresis motor – Reluctance motor – Switched reluctance motor – Permanent magnet DC motor – Brushless DC motor – Linear motors – Linear induction motors.			
Expected outcome.			
Upon successful completion of this course, students will be able to know the construction and principle of operation of certain special electrical machines having various applications.			
Text Book:			
1) E. G. Janardhanan, ‘ <i>Special Electrical Machines</i> ’ PHI Learning Private Limited.			
References:			
1) Irving L. Kosow, ‘ <i>Electrical Machinery and Transformers</i> ’, Oxford Science Publications.			
2) Veinott & Martin, ‘ <i>Fractional & Subfractional hp Electric Motors</i> ’. McGraw Hill International Edn.			
3) T. J. E. Miller, ‘ <i>Brushless PM and Reluctance Motor Drives</i> ’. C.Larendon Press, Oxford.			
4) Theodore Wildi, ‘ <i>Electric Machines, Drives and Power Systems</i> ’, Prentice Hall India Ltd.			
Course Plan			
Module	Contents	Hours	Sem.Exam Marks
I	AC Servomotors- Construction-principle of operation – performance characteristics – damped AC servomotors – Drag cup servomotor – applications. DC servomotors – field and armature controlled DC servomotors – permanent magnet armature controlled – series split field DC servomotor.	7 hrs	15%
II	Stepper motors – Basic principle – different types – variable reluctance- permanent magnet – hybrid type – comparison – theory of operation – monofilar and bifilar windings – modes of excitation – drive circuits – static and dynamic characteristics – applications	7 hrs	15%
FIRST INTERNAL EXAMINATION			
III	Single phase special electrical machines – AC series motor- construction – principle of working – phasor diagram – universal motor Hysteresis motor- constructional details- principle of operation – torque-slip characteristics – applications.	7 hrs	15
IV	Reluctance motors – principle of operation – torque equation – torque slip characteristics-applications. Switched reluctance motors – principle of operation – power converter circuits – torque equation – different types – comparison – applications.	7 hrs	15%
SECOND INTERNAL EXAMINATION			

V	Permanent Magnet DC Motors – construction – principle of working. Brushless dc motor – construction – trapezoidal type-sinusoidal type – comparison – applications.	7 hrs	20%
VI	Linear motors – different types – linear reluctance motor – linear synchronous motors – construction – comparison. Linear induction motors – Expression for linear force – equivalent circuit – applications.	7 hrs	20%
END SEMESTER EXAM			

EVALUATION SCHEME

- INTERNAL EVALUATION:**

MARKS FOR ASSIGNMENTS/SEMINARS/PROJECTS/CASE STUDY: 20

MARKS FOR TESTS : 30

- EXTERNAL EVALUATION:**

Maximum Marks: 100

Exam Duration: 3Hrs.

QUESTION PAPER PATTERN:

Part A: 8 questions.

One question from each module of Module I - IV; and two each from Module V & VI.

Student has to answer all questions. (8 x 5)=40

Part B: 8 questions

3 questions from each 2 module set; at least one question from each module.

Student has to answer any 2 from 3 questions: (2 x 10) x 3=60

Course No.	Course Name	L-T-P -Credits	Year of Introduction
EE 404	INDUSTRIAL INSTRUMENTATION AND AUTOMATION	2-1-0	2015

Course Objectives

To impart knowledge about the Industrial instrumentation and automation

Syllabus: Dynamic characteristic of instrumentation, signal conditioning, MEMS, Virtual instrumentation, actuators and PLC

Expected Outcome:

After the completion of the course student will be able to:

1. Select and describe the operation of instruments and transducers for various physical variables.
2. get an insight on data acquisition, processing and monitoring system
3. Design various signal conditioning systems for transducers.
4. Analyze dynamic responses of various systems.
5. Get the concepts of virtual instrumentaion
6. Understand the programming realization of PLC

3. G.K.Mc-Millan, 'Process/Industrial Instrument and control and hand book'Mc- GrawHill, New York,1999

Course Plan			
Module	Contents	Hours	Sem. Exam Marks
I		6	15%

	Introduction to Process Control - block diagram of process control loop, definition of elements. Sensor time response - first and second order responses. Review of Transducers: Characteristics and Choice of transducer-factors influencing choice of transducer		
II	Applications of Transducers Displace measurement: Resistance potentiometer, Capacitive and Inductive. Capacitive differential pressure measurement Torsional, shearing stress and rotating shaft Torque measurement using strain gauge. Flow measurement :Hotwire anemometer, constant resistance Constant current type Eddy current sensors, Variable reluctance tachometers Phase measurement :Analog and digital phase detectors Nano Instrumentation	8	15%
FIRST INTERNAL EXAMINATION			
III	Signal conditioning circuits-Instrumentation amplifiers-Unbalanced bridge. Bridge linearization using opamp Precision rectifiers, Log amplifiers, Charge amplifiers, Isolation amplifier, Switched capacitor circuits, Phase sensitive detectors, Noise problem in instrumentation and its minimisation	7	15%
IV	Micro Electromechanical system (MEMS) Advantages and Applications, MEMS micro sensors and actuators, Manufacturing process: Bulk micro machining and surface micromachining, MEMS accelerometers Virtual instrumentation system architecture of virtual instruments – Virtual instruments and traditional instruments – concepts of graphical programming	7	15%
SECOND INTERNAL EXAMINATION			
V	Overview of Automation System - Architecture of Industrial Automation Systems, Different devices used in Automation Actuators, definition, types, selection. Pneumatic, Hydraulic, Electrical, Electro-Pneumatic and valves , shape memory alloys	7	20%
VI	Introduction to Sequence Control, PLCs - Working, Specifications of PLC Onboard/Inline/Remote IO's, Comparison of PLC & PC, Relay Ladder Logic- PLC Programming- realization of AND, OR logic, concept of latching, Introduction to Timer/Counters, Exercises based on Timers, Counters. Basic concepts of SCADA, DCS and CNC	7	20%
END SEMESTER EXAM			

EVALUATION SCHEME

- **INTERNAL EVALUATION:**

MARKS FOR ASSIGNMENTS/SEMINARS/PROJECTS/CASE STUDY: 20

MARKS FOR TESTS : 30

- **EXTERNAL EVALUATION:**

Maximum Marks: 100

Exam Duration: 3Hrs.

QUESTION PAPER PATTERN:

Part A: 8 questions.

One question from each module of Module I - IV; and two each from Module V & VI.

Student has to answer all questions. $(8 \times 5) = 40$

Part B: 8 questions

3 questions from each 2 module set; at least one question from each module.

Student has to answer any 2 from 3 questions: $(2 \times 10) \times 3 = 60$

Course No.	Course Name	L-T-P -Credits	Year of Introduction
EE462	Design of Digital Control Systems	3-0-0-3	2015
Course Objectives: To introduce the need and concept of digital control system. To impart knowledge about different strategies adopted in the design of digital controllers. To familiarize with the design of different types of digital controllers.			
Syllabus: Basic digital control system-Pulse transfer function-Digital PID controller design-compensator design using frequency response - compensator design using root locus - Direct design-method of Ragazzini - Dead-beat controller design - State space analysis and controller design.			
Expected outcome. On successful completion, students will have the 1. Ability to design digital controllers. 2. Ability to analyse discrete time system using state space methods. 3. Ability to analyse the stability of discrete time system.			
Text Book: 1) M. Gopal, Digital Control and State Variable Methods, Tata McGraw-Hill, 1997 2) Ogata K., Discrete-Time Control Systems, Pearson Education, Asia. 3) C. L. Philips, H. T. Nagle, Digital Control Systems, Prentice-Hall, Englewood Cliffs, New Jersey, 1995. 4) Benjamin C. Kuo, Digital Control Systems, 2/e, Saunders College Publishing, Philadelphia, 1992.			
Data Book (Approved for use in the examination):			
References: 1) Liegh J. R., Applied Digital Control, Rinchart & Winston Inc., New Delhi. 2) Isermann R., Digital Control Systems, Fundamentals, Deterministic Control, V. I, 2/e, Springer Verlag, 1989. 3) Constantine H. Houppis and Gary B. Lamont, Digital Control Systems Theory, Hardware Software, McGraw Hill Book Company, 1985.			
Course Plan			
Module	Contents	Hours	Sem.E examM arks
I	Basic digital control system- Examples - mathematical model-ZOH and FOH-choice of sampling rate-principles of discretization - Mapping between s-domain and z-domain	7 hrs	15%
II	Pulse transfer function- Different configurations for the design- Modified z-transform-Time responses of discrete data systems-Steady state performance.	7 hrs	15%
FIRST INTERNAL EXAMINATION			
III	Digital PID and Compensator Design: Design of digital PID controller, Design of lag, lead compensators - based on frequency response method.	7 hrs	15%
IV	Digital Controller Design: Design based on root locus in the z-plane, direct design - method of Ragazzini. Dead-beat response design- Deadbeat controller.	7 hrs	15%
SECOND INTERNAL EXAMINATION			
V	State variable model of discrete data systems -Various canonical form representations-controllable, observable, diagonal and Jordan forms-Conversion from state space to transfer function -Computation of state transition matrix using Cayley-Hamilton theorem and z-transform method	7 hrs	20%

VI	Digital state feedback controller design: Complete state and output Controllability, Observability, stabilizability and reachability - Loss of controllability and observability due to sampling. Pole placement design using state feedback for SISO systems.	7 hrs	20%
END SEMESTER EXAM			

EVALUATION SCHEME

Part B: 8 questions

3 questions from each 2 module set; at least one question from each module.

Student has to answer any 2 from 3 questions: $(2 \times 10) \times 3 = 60$

Course No.	Course Name	L-T-P	Year of Introduction
EE 464	Flexible AC Transmission Systems	3-0-0-3	2015
Course Objectives: The objective of the course is to introduce various Power Electronics controllers used in the Power Systems for the fast real and reactive power control.			
Syllabus: Power flow control - Benefits of FACTS -Transmission line compensation. Uncompensated line -shunt and series compensation .Reactive power compensation . Static shunt and series compensators - Static Voltage and Phase Angle Regulators (TCVR &TCPAR). Switching Converter type shunt and series Compensators - principle of operation, configuration and control. Unified Power Flow Controller			
Expected Outcome After studying this subject , students are able to: - Understand various power electronics based FACTS devices for the control of active and reactive power in the system - Understand the control schemes of various FACTS devices.			
Textbooks and References 1. NGHingorani and L Gyugyi, "Understanding FACTS", IEEE Press, 2000 2. K R Padiyar, "FACTS Controllers in Power Transmission and Distribution", New Age International Publishers, 2007 3. COURSE PLAN

Module	Contents	Hours Allotted	% of Marks in End- Semester Examination
I	Power flow in Power Systems - Steady-state and dynamic problems in AC systems - Voltage regulation and reactive power flow control in Power Systems - control of dynamic power unbalances in Power System Power flow control -Constraints of maximum transmission line loading - Benefits of FACTS - Transmission line compensation: Compensation by a series capacitor connected at the midpoint of the line, Shunt Compensation connected at the midpoint of the line -Phase angle control.	7	15
II	Reactive power compensation - shunt and series compensation principles - reactive compensation at transmission and distribution level - Static versus passive VAr Compensators	6	15
FIRST INTERNAL EXAM			
III	Static shunt Compensator - Objectives of shunt compensations, Methods of controllable VAR generation - Variable impedance type VAR Generators -TCR , TSR, TSC, FC-TCR Principle of operation, configuration and control Static Series compensator - Objectives of series compensations, Variable impedance type series compensators - TCSC - Principle of operation, configuration and control.	8	15
IV	Static Voltage and Phase Angle Regulators (TCVR & TCPAR): Objectives of Voltage and Phase angle regulators Thyristor controlled Voltage and Phase angle Regulators	7	15
SECOND INTERNAL EXAM			
V	Switching converter type shunt Compensators.- Principle of operation, configuration and control , Comparison between SVC and STATCOM- Applications Switching converter type Series Compensators-(SSSC)- Principle of operation, configuration and control	7	20

VI	Unified Power Flow Controller: Circuit Arrangement, Operation and control of UPFC General Equivalent Circuit for Facts Controllers (Shunt+series) Introduction to interline power flow controller.	7	20
END SEMESTER EXAM

3 questions from each 2 module set; at least one question from each module.

Student has to answer any 2 from 3 questions: $(2 \times 10) \times 3 = 60$

Course No.	Course Name	L-T-P -Credits	Year of Introduction
EE 466	Digital Image Processing	3-0-0	2015
Course Objectives • To study the image fundamentals and mathematical transforms necessary for image processing. • To study the image enhancement techniques • To study image restoration procedures. • To study the image compression procedures • To study about morphological image processing. • To study the image segmentation and representation techniques.			
Syllabus Elements of visual perception, Basic geometric transformations, Separable Image Transforms, Spatial Domain methods, Frequency domain filters, Model of Image Degradation/restoration process, Compression Techniques, Morphological Processing, Segmentation, Representation and Description			
Expected Outcomes. • Demonstrated understanding of the basic concepts of two-dimensional signal acquisition, sampling, and quantization. • Demonstrated understanding of spatial filtering techniques, including linear and nonlinear methods. • Demonstrated understanding of 2D Fourier transform concepts, including the 2D DFT and FFT, and their use in frequency domain filtering. • Demonstrated programming skills in digital image processing related problems			
Text Book: 1. Rafael C. Gonzalez, Richard E. Woods, Digital Image Processing, Pearson Education			
Data Book (Approved for use in the examination):

4. William K. Pratt, Digital Image Processing, John Wiley & Sons

Course Plan

Module	Contents	Hours	Sem.ExamMarks
I	Elements of visual perception – Image sampling and quantization Basic relationship between pixels – Basic geometric transformations-Introduction to Fourier Transform and DFT – Properties of 2D Fourier Transform – FFT – Separable Image Transforms -Walsh –Hadamard – Discrete Cosine Transform, Haar transforms	7	15%
II	Spatial Domain methods: Basic grey level transformation – Histogram equalization –Image subtraction – Image averaging Spatial filtering: Smoothing, sharpening filters – Laplacian filters Frequency domain filters : Smoothing – Sharpening filters – Homomorphic filtering.	7	15%
FIRST INTERNAL EXAMINATION			
III	Model of Image Degradation/restoration process – Noise models – Inverse filtering –Least mean square filtering – Constrained least mean square filtering – Blind image restoration – Pseudo inverse – Singular value decomposition	7	15%
IV	Lossless compression: Variable length coding – LZW coding – Bit plane coding, predictive coding-DPCM.	7	15%

	Lossy Compression: Transform coding – Wavelet coding – Basics of Image compression standards: JPEG, MPEG		
SECOND INTERNAL EXAMINATION			
V	Morphological Image Processing-Dilation, Erosion, Morphological Reconstruction- Gray Scale Morphology Edge detection – Thresholding - Region Based segmentation	7	20%
VI	Boundary representation: chain codes- Polygonal approximation –Boundary segments – boundary descriptors: Simple descriptors Fourier descriptors - Regional descriptors – Simple descriptors	7	20%
END SEMESTER EXAM

EE 468	Computer Networks	3-0-0	2015
Course Objectives To teach the mode of operation of different types of computer networks that are used to interconnect a distributed community of computers and various interfacing standards and protocols			
Syllabus - Introduction on Computer Networks, Network Hardware, Protocol architecture, functionalities, MAC protocols, Network layer, Transport layer, Application Layer			
Expected Outcome. At the end of this subject, students should be able to: - Analyze the requirements for a given organizational structure and select the most appropriate networking architecture and technologies. - Specify and identify deficiencies in existing protocols, and then go onto formulate new and better protocols. - Analyze, specify and design the topological and routing strategies for an IP based networking infrastructure.			
Text Book: 1. "Computer Networking: A Top-Down Approach," by Jim Kurose and Keith Ross, 5th Edition. 2. "Computer Networks: A Systems Approach," by Larry L. Peterson and Bruce S. Davie			
Data Book (Approved for use in the examination): Nil
